

Red Line Slim

Iron - Steel - Stainless Steel

Reinforced Flat Thin Cutting Discs

Red Line

The already known and appreciated Kondor Red line gains a new range of extra thin cutting discs. Thanks to new manufacturing technologies, it gets two advantages which today couldn't be apart on cutting wheels market:

- Thickness 1,0 mm.
- Very competitive price, together with high performances and flexibility of application.

Technical features:

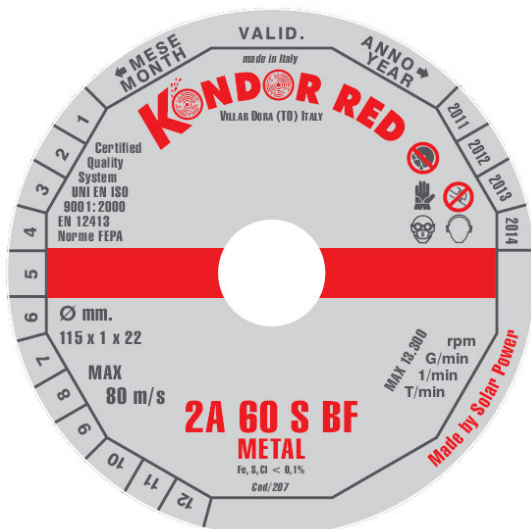

► Increased cutting speed and performance in comparison with the best traditional made discs existing in the market, thanks to its peculiar surface roughness (special moulding netting).

► Cutting temperature: reduction of overheating given by the above mentioned peculiarity; not smooth cutting surface conveys a better heat dispersion as well as a better discharge of working removal particles.

► Wide range of application: by only one disc is possible to get excellent results on: iron, steel, stainless steel*, aluminium and bronze, etc.

(* = this disc can be used also on stainless steel, Fe+Cl+S < 0,1%)

► "Environmental added value": this new production line is fed mainly by Electrical power produced by our new solar photovoltaic plant. Therefore, we warrant that CO2 emissions connected to manufacturing are reduced to the lowest level.

Type T2E Ømm. x Th. x Ø hole	Specification	Packaging
115 x 1,0 x 22	2A60S BF	30 / 120
115 x 1,6 x 22	2A46S BF	25 / 100
125 x 1,0 x 22	2A60S BF	30 / 120
125 x 1,6 x 22	2A46S BF	25 / 100
230 x 2,0 x 22	2A36S BF	40
